PROFESSIONAL SUMMARY

Java Developer with 4.5+ years of experience building scalable, secure, multi-tenant enterprise platforms with Java, Spring Boot, and event-driven microservices across Oil & Gas, FinTech, Healthcare, and Hospitality. Led a Java modernisation to Java 25 (from legacy 11/17) and an API migration across 50+ modules of a 55+ module SaaS platform. Mentored 30+ interns, own code reviews, and act as technical point of contact for 2 enterprise clients. Actively building toward AI-enabled backend development with Spring AI and LLM-integrated services, alongside full-stack delivery with React, and seeking a Java Developer role where I can combine strong backend engineering with AI integration and full-stack growth.

TECHNICAL SKILLS

Languages: Java 8/11/17/25, JavaScript (ES6+), SQL

Backend: Spring Boot, Spring Security, Spring Cloud, Spring Data JPA/Mongo, Hibernate, Spring AOP, Spring Cache

Architecture: Microservices, Event-Driven Architecture, REST, OData, GraphQL, Multi-Tenant SaaS, Design Patterns, OOP

Databases & Caching: MySQL, PostgreSQL, MongoDB, SAP HANA, Redis

Messaging & Integrations: ActiveMQ, RabbitMQ, Kafka, WebSocket, Stripe, Box, OpenText, Staffology, Quartz, Drools

Cloud & DevOps: AWS (EC2, S3, RDS, CloudFront), Docker, Jenkins, CI/CD, Kubernetes (K8s)

Collaboration: Code Reviews, Mentoring, Client Communication, Requirement Analysis, Agile/Scrum

Testing & Performance: JUnit, Mockito, Integration Testing, Gatling, IntelliJ Profiler

Frontend: React JS, HTML, CSS

Tools: Git (GitHub, GitLab), Maven, Gradle, Liquibase, Flyway, Postman, Jira, IntelliJ IDEA, DBeaver

Additional Skills: Data Structures & Algorithms, Spring AI, LLM API integration

EXPERIENCE

AsInt, Inc , *Senior Developer* Aug 2024 – present | Remote

Enterprise multi-tenant Asset Performance Management / Risk-Based Inspection SaaS (55+ modules) built on Java and Spring Boot, serving global energy and chemical clients.

- Led the migration of legacy GraphQL interfaces to OData across 50+ modules, building a reusable HTTP client abstraction that retired all legacy GraphQL endpoints.
- Led the runtime modernisation to Java 25 from legacy Java 11/17, including a major framework upgrade to Spring Boot 4.x, using automated migration tooling validated by automated tests.
- Built a standalone Spring Boot export microservice with ActiveMQ-driven asynchronous processing to generate Excel, PDF and consolidated reports, decoupling reporting load from the core platform.
- Serve as technical point of contact for 2 enterprise clients: lead requirement clarification and technical discussions, translate business needs into backend design, and communicate delivery status, risks, and trade-offs.
- Mentor 30+ interns and own code reviews across the team, sustaining ~95% sprint delivery consistency.
- Designed and implemented 20+ engineering calculation algorithms (TMIN, MAWP, corrosion rate, inspection recommendations, test intervals) for the Risk-Based Inspection engine, each with unit and integration tests, then refactored them into reusable calculators using Factory and Strategy patterns.
- Built an event-driven integration layer connecting document-management (OpenText), asset-management, and ERP (SAP S/4HANA) systems, supporting 1000+ daily asset transactions.
- Improved performance with Redis caching, insert-to-upsert conversion, and optimised SQL views and data models, reducing query latency by ~30%; fixed memory leaks with IntelliJ Profiler, cutting memory usage by ~45%.
- Delivered 130+ stories and defects across the platform (~620K lines changed across 2,000+ files).

Coditas Solutions LLP , *Software Engineer* Oct 2023 – Jul 2024 | Pune - MH, India

- Designed and built backend services across FinTech, Healthcare, and Hospitality client products using Java, Spring Boot, JPA, and microservices.
- Developed microservices with Spring Boot, Spring Cloud, and Spring Cloud Gateway, secured with JWT and Spring Security.
- Integrated payment and third-party systems (Stripe, Box, AWS S3) with refund handling and validation rules.
- Integrated a Drools rules engine for risk profiling and payout logic, built a real-time WebSocket pricing service, and added Quartz schedulers for background jobs.
- Resolved concurrency issues with database locking and reduced downtime by ~40% through performance tuning.
- Improved database performance by ~60% through schema and query optimisation in MySQL and PostgreSQL, plus caching, pagination, and indexing.

Coditas Solutions LLP , *Associate Software Engineer* Jan 2022 – Sep 2023 | Pune - MH, India

- Designed and developed RESTful APIs for HR, Recruitment, and Training client products (Java, Spring Boot, MySQL, PostgreSQL, MongoDB).
- Applied design patterns and clean-code practices, reducing application load time by ~60%.
- Implemented API gateway routing and security with Spring Cloud Gateway and Spring Security.
- Designed and optimised database schemas and SQL queries, and used Liquibase for schema versioning.

- Worked in Agile teams with frontend, UI/UX, and QA on requirements analysis, design, and delivery.

PROJECTS

Enterprise Asset Management Platform, *Oil & Gas*
Tech: Java, Spring Boot, SAP HANA, OData, OpenText, Microservices, Redis, ActiveMQ, SAP S/4HANA, GraphQL

A multi-tenant SaaS that helps energy and chemical companies manage asset integrity and reliability across 55+ functional modules. Built the engineering-calculation engine, event-driven ERP and document-management integration, and an ActiveMQ-based export service for Excel, PDF, and consolidated reports. Focus areas were correctness of inspection calculations, scalability under high transaction volume, and clean module architecture.

Workforce & Payroll Management System, *Hospitality*
Tech: Java, Spring Boot, MySQL, Spring Security, JWT, Staffology, AWS (S3, CloudFront, RDS, Secrets), Docker, K8s

A workforce and operations platform for multi-branch hospitality businesses. Delivered shift scheduling, real-time attendance validation, and check-in/check-out tracking, with automated payroll and invoice generation via Staffology. Reduced manual operational effort and improved workforce visibility across branches.

Secure Healthcare SaaS Platform, *Healthcare*
Tech: Java, Spring Boot, PostgreSQL, Microservices, RabbitMQ, Box API, Stripe, AWS (EC2, S3, CloudFront), Docker, K8s

A SaaS platform for medical imaging and file management, enabling labs and organisations to store and monetise 3D scans, reports, and patient records. Built subscription-based access, role-based permissions, paid downloads with configurable pricing, and admin controls for offers and organisation configuration.

Interview Scheduling & Coordination Platform, *HR & Recruitment*
Tech: Java, Spring Boot, MySQL, Spring Cloud, Liquibase, Google Services

A recruitment-coordination system that streamlines interview scheduling between candidates, employees and talent-acquisition teams. Delivered employee-driven slot booking, TA dashboards for tracking interviews, and candidate evaluation and feedback workflows, with Liquibase-managed schema versioning.

Learning & Development Platform, *HR & Training*
Tech: Java, Spring Boot, MongoDB, Spring Data Mongo, Hibernate

An L&D platform to run intern and training programmes end-to-end. Built intern lifecycle management, daily performance tracking with mentor mapping, and batch-level training organisation and reporting, using MongoDB for flexible performance and progress data.

EDUCATION

B.Tech, Computer Science and Engineering Aug 2018 – Jul 2022 | Bhopal - MP, India
IES Institute of Technology And Management (RGPV), Bhopal

AWARDS

Academic Best Performer, *IES University, Bhopal - MP* May 2022

Star Achiever, *IES University, Bhopal - MP* Feb 2020

Star Achiever, *IES University, Bhopal - MP* Feb 2019

LANGUAGES

English | Hindi | Bhojpuri
